

Appeal for Environmental Protection

1. We will take good care of things and try to reduce the amount of trash we produce.

We will always keep in mind that it is important to care for the things around us, and try not to waste them by using them as long as we can.

2. We will try to stop littering in our cities to keep them clean and beautiful.

With "Trash belongs in a trash can" as our motto, we will try to reduce littering in our cities. Littering leads to the pollution and destruction of our natural environment.

We will keep our cities clean and beautiful by participating actively in cleanup activities around our schools and in our communities.

3. We will try to recycle by separating different types of waste.

In order to protect the natural environment, we will separate different types of waste, such as cans, glass bottles, plastic bottles, batteries and so on. Each one of us will try to reduce waste by thinking seriously about ways to recycle our precious resources.

4. We will try to make the most of our limited resources.

We will try to conserve electricity, natural gas, petroleum and water and explore new methods for using them more efficiently.

5. We will try to live in harmony with all living things.

We will always try to protect the natural environment and think of ways to live in harmony with nature. We will try to create and maintain a global environment in which all living things can coexist peacefully.
